

# Year 8 Unit 2: Number

## INDEX NOTATION

$a = b^n$   
*a is the power*  
*b is the base*  
*n is the index*

## INDEX LAWS: MULTIPLICATION AND DIVISION

when the **base** is the **same**, we use the following laws when multiplying and dividing

<b>multiplying</b>	<b>add the powers</b> e.g. $a^m \times a^n = a^{m+n}$
<b>dividing</b>	<b>subtract the powers</b> e.g. $a^m \div a^n = a^{m-n}$
<b>raising a power by another power</b>	<b>multiply the powers</b> e.g. $(a^m)^n = a^{mn}$

## SQUARES AND ROOTS

<b>index</b>	tells us <b>how many times</b> to use the number in a <b>repeated multiplication</b>
<b>root (fractional index)</b>	the <b>inverse</b> of an index

## POSITIVE INTEGER POWERS

<b>square numbers</b>	the <b>answer</b> when you <b>multiply a number by itself</b> : $n^2$ 1, 4, 9, 16, 25, 36, 49, 64, 81, 100, 121, 144...
<b>cube numbers</b>	the <b>answer</b> when you <b>multiply a number by itself, and then by itself again</b> : $n^3$ 1, 8, 27, 64, 125, 216, 343, 512, 729, 1000...
<b>powers of 10</b>	$10^n$ 10, 100, 1000, 10 000, 100 000...

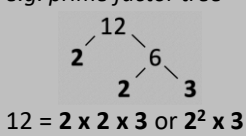

## Pythagoras's Theorem

<b>Pythagoras' theorem</b>	a <b>relationship</b> between the <b>3 sides</b> on a <b>right angled triangle</b>
<b>Pythagoras' theorem</b>	$a^2 + b^2 = c^2$ 'c' is always the <b>hypotenuse</b>

## STANDARD FORM: NOTATION

<b>notation</b>	allows us to write <b>very large</b> or <b>very small</b> numbers without lots of zeros <b>numbers written</b> in the form $A \times 10^n$ 'A' is <b>between 1 and 10</b> 'n' is any <b>integer</b>
<b>'n' is positive</b>	<b>large</b> number ( $\geq 1$ )
<b>'n' is negative</b>	<b>small</b> number ( $< 1$ )

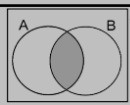

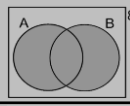

## MULTIPLES, FACTORS AND PRIME NUMBERS

<b>multiple</b>	the result of <b>multiplying</b> a number by an integer, e.g. <i>the 3<sup>rd</sup> multiple of 7 is 21</i>
<b>lowest common multiple (LCM)</b>	the <b>lowest common number</b> in the <b>multiplication tables</b> of two or more different numbers
<b>factor</b>	a quantity which <b>divides equally</b> into a number, e.g. <i>factors of 8 are 1, 2, 4 and 8</i>
<b>highest common factor (HCF)</b>	the <b>highest factor</b> which belongs to two or more numbers
<b>prime number</b>	an integer greater than 1 that has <b>exactly two factors, 1 and itself</b> 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31...
<b>prime factor</b>	a <b>factor</b> of a number which is also <b>prime</b>
<b>decomposition</b>	to <b>break something down</b>
<b>product of prime factors (prime factorisation)</b>	a set of <b>prime factors</b> which <b>multiply</b> to give a number e.g. <i>prime factor tree</i> 
<b>unique factorisation theorem</b>	the fundamental theorem of arithmetic Each integer can be written as a <b>unique product of prime factors</b> . This is why 1 is not a prime number.

## SETS

<b>set</b>	a <b>collection of items</b> with one of each member
{ }	brackets are written at the <b>start and end</b> when <b>listing elements</b> in the set
$\xi$	the <b>universal set</b> : <b>everything</b> we are interested in
$\in$	' <b>element of a set</b> ' or member of a set (a value in the set)
$\notin$	' <b>not an element of a set</b> '
$\emptyset$	the ' <b>empty set</b> '
$n(A)$	the <b>number of elements</b> in a set A

## VENN DIAGRAMS

<b>Venn diagram</b>	a diagram using circles or other shapes, to <b>show the relationship between sets</b>
<b>set</b>	a <b>collection of items</b> with one of each member
<b>the intersection</b>	$(A \cap B)$ in A and in B 
<b>the union</b>	$(A \cup B)$ in A or in B or in both 
<b>the complement</b>	$A'$ not in A
